SUBJECT: BAY & DAY COMMERCE CENTER CUMULATIVE NOISE ASSESSMENT

Dear Mr. David Ornelas:

Urban Crossroads, Inc. is pleased to submit this noise assessment of the off-site improvements for the Bay & Day Commerce Center (“Project”), which is located at located on the southwestern corner of Day Street and Bay Avenue in the City of Moreno Valley. The proposed Project consists of a 194,775 square foot warehouse building (75% general warehousing use and 25% high-cube cold storage warehouse use on Lot 1). On February 19, 2024, Urban Crossroads, Inc. prepared the Bay & Day Commerce Center, Noise Analysis (NA). The NA presented the existing ambient noise levels and an analysis of the potential Project-related short-term construction noise impacts and long-term stationary-source operational noise.

While the NA considered the direct Project-related noise impacts, it is expected that the nearest sensitive receiver locations may also experience additional background cumulative construction and operational noise impacts due to other project developments near the Project site. A cumulative impact consists of an impact which is created due to the combination of the Project related noise impacts together with other project noise impacts. Exhibit A presents the Project site and the nearby cumulative projects that were considered in this noise assessment. The cumulative noise assessment includes the four following nearby projects:

- Cottonwood & Edgemont Warehouse
- Alessandro Corporate Center
- Alessandro & Old 215 Industrial Park
- Moreno Valley Business Center

CONSTRUCTION NOISE STANDARDS

The Municipal Code noise standards for construction are described below for the City of Moreno Valley to determine the potential noise impacts. As a subset of its stationary-source noise regulations, the City Municipal Code establishes permitted hours of construction activity. More specifically, Municipal Code Section 11.80.030 (D)(7), *Construction and Demolition*, provides the following:

No person shall operate, or cause operation of any tools or equipment used in construction, drilling, repair, alteration, or demolition work between the hours of eight p.m. and seven a.m. the following day such that the sound there from creates a noise disturbance, except for emergency work by public service utilities or for other work approved by the city manager or designee.

EXHIBIT A: CUMULATIVE PROJECT LOCATIONS

LEGEND:

[Red dashed box] Site Boundary [Black circle] Receiver Locations [Light green square] Cumulative Project

Therefore, based on Section 11.80.030 (D)(7) construction regulations, a construction-related *noise disturbance* occurs if Project construction activity occurs outside of the permitted hours. However, for this analysis, the stationary-source noise level limits of 65 dBA L_{eq} when measured at two hundred feet or more from the source during the daytime hours are used as appropriate thresholds. In addition, grading operations shall be limited to the hours identified in Section 8.21.050 (O) of 7:00 a.m. to 6:00 p.m., Monday through Friday, and 8:00 a.m. to 4:00 p.m. on weekends and holidays or as approved by the City Engineer.

CUMULATIVE CONSTRUCTION NOISE ANALYSIS

It is expected that the nearest sensitive receiver locations may also experience additional background construction noise impacts due to other project construction activities. Using the highest reference construction equipment noise levels of 115 L_w for grading activity outlined in the NIA and the CadnaA noise prediction model, calculations of the Project cumulative construction noise level impacts at the nearby sensitive receiver locations were completed. The actual timing of construction for each Project is not known at this time and it is unlikely that all the project-related and cumulative construction activity will happen at the same time. However, to present the worst-case conservative condition, Table 1 presents a summary of the cumulative noise levels assuming all projects are constructed concurrently. Appendix A includes the detailed CadnaA cumulative construction noise model inputs and calculations.

TABLE 1: CUMULATIVE CONSTRUCTION NOISE LEVEL

Receiver Location ¹	Cumulative Construction Noise Levels (dBA L _{eq})					
	Site Preparation	Grading	Building Construction	Paving	Architectural Coating	Highest Levels ²
R1	65.3	68.3	66.3	68.3	62.3	68.3
R2	65.4	68.4	66.4	68.4	62.4	68.4
R3	68.3	71.3	69.3	71.3	65.3	71.3
R4	63.1	66.1	64.1	66.1	60.1	66.1
R5	64.1	67.1	65.1	67.1	61.1	67.1
at 200'	61.4	64.4	62.4	64.4	58.4	64.4

¹ Noise receiver locations are shown on Exhibit A.

² Construction noise level calculations based on distance from the construction activity, which is measured from the Project site boundary to the nearest receiver locations. CadnaA construction noise model inputs are included in Appendix A.

The cumulative construction noise analysis on Table 1 shows that the nearby receiver locations will range from 60.1 to 71.3 dBA L_{eq} at the nearest receiver locations. The cumulative construction noise analysis shows that the cumulative construction noise level of 64.4 dBA L_{eq} will satisfy the City of Moreno Valley daytime 65 dBA L_{eq} significance threshold at 200 feet.

Therefore, the noise impacts due to Project construction noise is considered *less than significant* at all receiver locations and at 200 feet from the property line of the source. In addition, Municipal Code Section 11.80.030(D)(7) limits general construction activities within 200 feet of residential uses to weekdays, between 7:00 a.m. and 8:00 p.m. Because construction activities are typically limited to weekdays, during daylight hours, the direct and cumulative construction noise impacts are considered a nuisance or annoying, rather than a significant impact upon surrounding land uses.

CUMULATIVE OPERATIONAL NOISE ANALYSIS

To demonstrate compliance with local noise regulations, the Project-only operational noise levels are evaluated against exterior noise level thresholds based on the City of Moreno Valley exterior noise level standards at the nearest noise-sensitive receiver locations. Table 2 shows the cumulative operational noise levels with the planned perimeter walls for Bay & Day Commerce Center Project and the four cumulative projects. Appendix B includes the detailed CadnaA cumulative operational noise model inputs and calculations.

TABLE 2: OPERATIONAL NOISE LEVELS

Receiver Location ¹	Cumulative + Project Noise Levels (dBA Leq) ²		Noise Level Standards (dBA Leq) ³		Noise Level Standards Exceeded? ⁴	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime
R1	54.1	53.2	65	60	No	No
R2	52.8	52.7	65	60	No	No
R3	58.4	58.3	65	60	No	No
R4	56.5	56.5	65	60	No	No
R5	57.4	57.4	65	60	No	No
@200	55.9	55.9	65	60	No	No

¹ See Exhibit A for the receiver locations.

² Cumulative + Project operational noise level calculations are included in Appendix B.

³ Exterior noise level standards for source (commercial) land use.

⁴ Do the estimated Project operational noise source activities exceed the noise level standards?

"Daytime" = 8:00 a.m. - 10:00 p.m.; "Nighttime" = 10:01 p.m. - 7:59 a.m.

Mr. David Ornelas

T&B Planning, Inc.

May 2, 2024

Page 5 of 5

Table 2 shows the cumulative operational noise levels will satisfy the City of Moreno Valley 65 dBA L_{eq} daytime and 60 dBA L_{eq} nighttime exterior noise level standards at all the nearest receiver locations and at 200 feet from the property line of the source with the planned perimeter walls. Therefore, the cumulative operational noise impacts are considered *less than significant* at the nearest noise-sensitive receiver locations. If you have any questions, please contact me directly at (949) 584-3148.

Respectfully submitted,

URBAN CROSSROADS, INC.
